Remedios' Terrarium

FOFA Gallery | Concordia University
1515 Ste. Catherine St. West
Montreal | Quebec | Canada

March 17 - April 4, 2008

Remedios' Terrarium articulates morphogenesis in a space artificially augmented by green plants, light- or sound-bearing materials, and machinic memory.

The main Gallery acts as an alchemical vessel mixing multiple species of matter responding to activity inside and outside the space: calligraphic video and sound, plastic cells, structured light, and in certain moments, performers. Other chambers contain sculptural reflections on the terrarium.

We compose the exhibition as two and a half week long event breathing according to clocks as well as contingent activity, punctuated by a performance.

Remedios' Terrarium features works by affiliates of the TML from the MFA Fibre Arts program, Design Computation Arts, Computer Science, Electroacoustics, Theatre, Contemporary Dance, and the Architecture program of the University of Manitoba.

Special thanks to the Hexagram Institute for Research/Creation in Media Arts and Technologies; Canada Foundation for Innovation; Social Sciences and Humanities Research Council; Centre Interuniversitaire des Arts Médias, and the University of Manitoba's Faculty of Architecture and Graduate Student Association.
